Key Insights

- **Overall Funnel Health:** Of 5,000 total leads, 1,037 converted (20.7%). The 29.0% bounce rate signals significant early-stage drop-off.
- **Best Performing Channel:** Organic Search generates the most revenue. Direct delivers the best ROAS — every dollar invested returns the most. Budget should be scaled here first.
- **Checkout is the Biggest Leak:** The Checkout → Converted stage shows the steepest drop-off (57.7% conversion). Simplifying checkout and adding trust signals directly improves revenue.
- **Mobile UX Gap:** Mobile drives 40%+ of traffic but converts at a lower rate than Desktop. Mobile-first optimizations are a high-impact, low-effort opportunity.
- **Seasonal Patterns Exist:** Monthly data shows clear peaks and troughs. Budget should be increased during high-converting months and campaigns re-evaluated in low-performing periods.
- **25–34 Age Group Converts Best:** The 25–34 segment has the highest conversion rate. Scaling lookalike audiences based on this group can significantly grow overall conversions.
- **CPA Imbalance Across Channels:** Social Media has the highest CPA — meaning you pay the most per customer acquired. Reallocating this budget to lower-CPA channels improves efficiency immediately.

Actionable Recommendations

- 1. Fix Checkout Drop-off First:** Add progress bars, trust badges, and reduce form fields at checkout. A/B test single-page vs multi-step checkout. Even a 5% lift here compounds into major revenue.
- 2. Scale Budget on Best ROAS Channels:** Shift 20–30% of budget away from Social Media toward Email and Referral. These channels convert better at lower cost per acquisition.
- 3. Mobile-First UX Audit:** Run a full mobile funnel audit from landing page through checkout. Faster load times, larger CTAs, and auto-filled forms directly lift mobile conversion rates.
- 4. Retarget Warm Leads:** Set up retargeting campaigns for visitors who reached Product View or Checkout without converting. These are your highest-intent, cheapest-to-convert audience.
- 5. Align Spend with Seasonal Peaks:** Use monthly trend data to pre-load budget in high-converting months. Launching campaigns just before seasonal peaks maximizes returns.
- 6. Invest in 25–34 Segment Campaigns:** Build lookalike audiences based on existing converters in this age group. Use tailored messaging and personalized landing pages for maximum relevance.
